

DIVY PATTANI

Full-Stack Developer | React · Node.js · NestJS | AI-Assisted Development

Ahmedabad, India | divy2546@gmail.com | +91 9265615512 | linkedin.com/in/divy-pattani | github.com/ONLYCAKE | myportfolio-five-iota-48.vercel.app

SUMMARY

Full-Stack Developer with 1 year of professional experience independently designing and building production-grade SaaS and ERP platforms, including a solo-built multi-tenant invoicing and accounting system, a crypto-trading bot platform, and a restaurant POS/ERP, using React, Next.js, Node.js (NestJS/AdonisJS), PostgreSQL, and Redis. Strong track record of end-to-end ownership: database architecture, REST API design, payment integration, real-time systems, and production debugging, supported by an efficient AI-assisted development workflow. Currently completing a B.Tech in Information Technology.

TECHNICAL SKILLS

Frontend Development: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3

Backend & APIs: Node.js, NestJS, AdonisJS, Express.js, REST APIs, API Integration, WebSockets (Socket.IO)

Programming Languages: Python, JavaScript, TypeScript, SQL

Databases: PostgreSQL, MongoDB, Redis, Supabase

ORM: Prisma, Lucid ORM

Security & Application: Authentication, Authorization, RBAC, Input Validation, Session Management

AI & Machine Learning: Generative AI, Prompt Engineering, LLM Optimization, AI Workflow Development

AI Tools & Platforms: Claude, GitHub Copilot, Perplexity AI, Cursor, Amazon Q, Antigravity, Playwright MCP

Tools & Platforms: Git, GitHub, Linux, Postman, pgAdmin

PROFESSIONAL EXPERIENCE

Full-Stack Developer - Peanut Square LLP (*Nov 2025 to Present*)

- Independently designed and delivered multiple production SaaS and ERP platforms end-to-end, from database architecture through deployment-ready code, for clients spanning fintech, hospitality, manufacturing, and industrial B2B sectors.
- Owned full-stack development across 6 production codebases, including sole ownership of a multi-tenant invoicing SaaS platform and a performance-critical industrial catalog website.
- Designed REST APIs, relational database schemas, and real-time systems (WebSockets) handling concurrency, payment processing, and multi-tenant data isolation.
- Used AI-assisted development workflows (Claude, GitHub Copilot, Cursor, Antigravity) to accelerate implementation, debugging, and automated testing (Playwright MCP), while retaining full code review and ownership.

KEY PROJECTS

Invoicing Platform - B2B Invoicing & Accounting SaaS - *AdonisJS, React, PostgreSQL, Vite*

- Independently architected and built a multi-tenant invoicing and accounting SaaS covering the full order-to-cash and procure-to-pay cycle: quotations, proformas, invoices, payments, and ledgers.
- Designed the core database schema and REST API architecture covering inventory, accounting journals, bank reconciliation, and expense tracking modules.
- Implemented concurrency-safe inventory writes by catching database unique-constraint conflicts and falling back to atomic update logic, preventing stock errors under simultaneous requests.
- Built a role-based permission system computing effective access as role permissions combined with user-level grants and denials.
- Built a change-tracking and audit-logging system recording every data mutation with user, tenant, and timestamp details, along with automated PDF generation for invoices and reports.

PS-Resto - Restaurant ERP + POS System - *AdonisJS, React, PostgreSQL, Redis, Socket.IO*

- Bootstrapped and built the backend of a multi-tenant restaurant POS and ERP system from initial setup, covering fast billing, table management, KOT, and multi-outlet operations.
- Designed concurrency-safe table management using row-level database locking to prevent double-seating during simultaneous orders.
- Built a large invoice and settlement engine supporting split payments and recipe-based inventory stock deduction.
- Integrated the Razorpay payment gateway with idempotent webhook processing and signature verification for reliable transaction handling.
- Implemented tenant-isolated real-time WebSocket channels for live order, table, and kitchen status synchronization.

KEY PROJECTS

Mhtbotx - Crypto Trading Bot SaaS Platform - *NestJS, Next.js, PostgreSQL*

- Built core backend systems for a SaaS platform enabling users to deploy automated crypto trading bots integrated with the Binance API.
- Designed a multi-level referral commission engine using recursive tree traversal with configurable per-level percentages and error isolation.
- Developed a multi-wallet transfer and ledger system based on double-entry bookkeeping, with automatic balance fallback between wallets.
- Built a consolidated log-ingestion system handling multiple trading-bot log formats with per-type deduplication logic.
- Implemented real-time profit-and-loss tracking using adaptive polling intervals based on bot run state.

Sunshine ERP - Enterprise Business Platform - *NestJS, React, PostgreSQL, TypeScript*

- Contributed extensively to a full-scale enterprise platform covering sales quotations, work orders, dispatches, inventory, and finance modules.
- Led a complete mobile-responsiveness overhaul across the application for consistent usability and UX across devices.
- Built a multi-sheet Excel bulk-import system for product data with grade mapping, validation, and cross-sheet merge logic.
- Designed a collision-free unique code generator using a multi-strategy fallback cascade, and resolved a PostgreSQL nullable-unique-constraint issue with a partial index.
- Implemented extensive input validation and sanitization (phone, email, tax, currency fields) across the application.

ACHIEVEMENTS

- 1st Runner-Up, Open-Innovation Track, Nirma University 48-hour Hackathon; secured a 10,000 prize for DeployWhisper, an AI-powered deployment assistant.

CERTIFICATIONS

- 21st Century Employability Skills Program (Advanced) - Wadhvani Foundation
- Exploratory Data Analysis for Machine Learning - IBM via Coursera
- Introduction to HTML, CSS & JavaScript - IBM via Coursera
- Python Internship Program - Baronial Talent Builders
- Frontend Developer Internship Program - Micro Information Technology Services
- Hackovate LJ 2025 - Developed AI-Powered Solar Energy Prediction System with Team CodeMatrix

EDUCATION

- B.Tech, Information Technology - LJ Institute of Engineering and Technology (Sep 2024 - Present)
- Diploma, Computer Engineering - Ranchhodlal Chhotalal Technical Institute, GTU (Aug 2021 - May 2024), CGPA 6.9
